                 New human and murine neurotrypsin - used, e.g. for inhibiting tumours, treatment of neurological or lung disease, including by gene therapy and in drug development Claim 1; Page 20-24; SOpp; English.

The present sequence encodes human neurotrypsin. Neurotrypsin proteing and polynucleotides can be used: (1) to inhibit tumours, including metastases, e.g. of brain or retina; (ii) to minimise tissue damage caused by stroke or brain injury (having a protective effect on the penumbra zone); (iii) to treat or prevent neurodegeneration,
                                                                                                                                                                                                             P-PSDB; W83361

New serine protease expressed in brain tissue - used in screening for potential serine protease inhibitors for drug use Example 1; Page 45-50; 69pp; Japanese.

The present sequence encodes a serine protease designated BSSP-3, which is isolated from mouse brain tissue. Transformants may be used to produce the enzyme or its partial sequences. Products from the present invention are used for screening for potential peptide or non-peptide serine protease inhibitors or expression regulators for use as drugs. Sequence 2614 BP; 614 A; 671 C; 799 G; 530 T;
                                                                                                                                                                                                                                                      TSURNCH OF TSURTORY LID: TSURUOKA N, Yamaguchi N, WPI; 99-142942/12.

New human and murine neurotrypsin - used, e.g. for inhibiting Lumours, treatment of neurological or lung disease, including by gene therapy and in drug development gene therapy and in drug development CC The present sequence encodes mouse neurotrypsin. Neurotrypsin proteins CC and polynuclectides can be used: (i) to inhibit tumours, including CC metastases, e.g. of brain or retina; (ii) to minimise tissue damage CC caused by stroke or brain injury (having a protective effect on the CC penumbra zone); (iii) to treat or prevent neurodegeneration, cc increase survival of damaged neurons (e.g. in cases of hypoxia, cc ischaemia, nerve transection) and to stimulate regeneration and/or restoration or synapses; (v) to treat or prevent retinal disorders (e.g. degeneration or neoangiogenesis); (vi) to prevent apoptosis (or other causes of cell death) in the nervous system; (vii) to regenerate brain cc and/or nervous tissue; (viii) to treat pain; (ix) to improve brain encous insulater consumers (x) to treat or prevent apoptosis (or other candor nervous tissue; (viii) to treat pain; (ix) to improve brain cc wide range of psychiatric disorders; and (xi) to treat or lung consumers (consumers) and (xi) to treat brain or lung consumers (consumers) and (xi) to treat brain or lung consumers (consumers) and (xi) to treat brain or lung consumers (consumers) and (xi) to treat brain or lung consumers (consumers) and (xi) to treat brain or lung consumers (consumers) and (xi) to treat brain or lung consumers (consumers) and (xi) to treat brain or lung consumers (consumers) and (xi) to treat brain or lung consumers (consumers) and (xi) to treat brain or lung consumers (consumers) and (xi) to treat brain or lung consumers (consumers) and (xi) to treat brain or lung consumers (consumers) and (xi) to treat brain or lung consumers (consumers) and (xi) to treat brain or lung consumers (consumers) and (xi) to treat brain or lung consumers (consumers) and (xi) to treat brain or lung consumers (consumers) and (xi) to treat brain or lung consum
                                                                                                                                                                                                                                                                                                                                                                                                   P-PSDB; W83362

This sequence encodes a human protein which contains a SRCR (scavenger receptor, cysteine-rich) domain. The gene and encoded protein can be used to diagnose or treat tumours, particularly of the nervous system (medullo-blastoma or glioma) or breast. The DNA sequence and probes derived from it, are used to identify genes that express SRCR-domain containing proteins, to determine the form in which these proteins exist and to assess the significance of individual forms on cellular properties. The protein can be used to detect the presence of autoantibodies and antibodies which regulate its expression.

Sequence: 5802 BP; 1253 A; 1614 C; 1576 G; 1359 T;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         뮹
                                                                                                                                                                                                                                                                                                                                                                    portion of a macrophage scavenger receptor protein

The bovine scavanger receptor protein gene was isolated by screening

The bovine scavanger receptor protein gene was isolated by screening

The bovine scavanger receptor protein gene was isolated by screening

a bovine lung cDNA library with degenerate probes designed based on

fragments of the purified scavanger receptor protein. The DNA encodes

a scavanger receptor protein which has a binding capacity for

acetylated low density lipoprotein (LDL) and binds endotoxin.

Fragments of the extracellular portion of the scavanger receptor

protein inactivate endotoxin-related substances and are used in the

diagnosis and treatment of endotoxaenia. They may be administered

tragments may also be fixed to inert supports for purificn. purposes.

The fragments may be modified to have greater binding affinity for

the endotoxin-related substance than the native scavanger receptor

protein, or to more effectively neutralise the toxic or pathogenic

effects of mols. that bind the scavanger receptor protein or of

organisms which express such mols.

Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from pools of 5,000 clones made from the same 3 libraries. The pools consisted of I.M.A.G.E. clones 297480-302087, 682632-687239, 726408-728711, and 728906-731399. Subtraction by Bento Soares and M. Fatima Bonaldo. "

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Ø
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                /note-"Vector: pT/T3D-Pac (Pharmacia) with a modified polylinker; 1st strand cDNA was prepared from 3 pooled germ cell tumors, and was then primed with a Not I oligo(dT) primer. Double-stranded cDNA was ligated to Eco RI adaptors (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of the modified pT/T3 vector. Library is normalized. Library was constructed by Bento Soares and M. Fatima Bonaldo."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                /tissue_type="pooled germ

Statistics: Mean 37.360; Variance 145.793; 'scale 0.256

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

New Serine protease expressed in brain tissue - used in screening for potential serine protease inhibitors for drug use Claim 1; Page 61-65; 69pp; Japanese. The present sequence is a serine protease designated BSSP-3, which is isolated from human brain tissue. Transformants may be used to produce the enzyme or its partial sequences. Products from the present invention are used for screening for potential peptide or non-peptide serine protease inhibitors or expression regulators for use as drugs. Sequence 822 AA;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Q
New human and murine neurotrypsin - used, e.g. for inhibiting by tumours, treatment of neurological or lung disease, including by gene therapy and in drug development as Claim 1; Page 20-24; Sopp; English.

The present sequence represents human neurotrypsin. Neurotrypsin proteins and polynucleotides can be used: (i) to inhibit tumours, including can polynucleotides can be used: (i) to inhibit tumours, including can polynucleotides can be used: (i) to inhibit tumours, including can polynucleotides can be used: (i) to inhibit tumours, including can polynucleotides can be used: (i) to inhibit tumours, including can polynucleotides can be used: (i) to inhibit tumours, including can polynucleotides can be used: (i) to minimise tissue damage caused by stroke or brain injury (having a protective effect on the commons of (iii) to treat or prevent neurodegeneration, can cause of hypoxia, concrease survival of damaged neurons (e.g. in cases of hypoxia, or estination, nerve transection) and to stimulate regeneration and/or can causes of cell death) in the nervous system; (vii) to regenerate brain causes of cell death) in the nervous system; (vii) to regenerate brain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁

The present sequence represents mouse neurotrypsin. Neurotrypsin proteins and polynucleotides can be used: (i) to inhibit tumours, including metastases, e.g. of brain or retina; (ii) to minimise tissue damage caused by stroke or brain injury (having a protective effect on the penumbra zone); (iii) to treat or prevent neurodegeneration, neuroinflammatory disease (e.g. multiple sclerosis) or epilepsy; (iv) to increase survival of damaged neurons (e.g. in cases of hypoxia, causes of synapses; (v) to treat or prevent retinal disorders (e.g. degeneration of synapses; (v) to treat or prevent appptosis (or other causes of cell death) in the nervous system; (vii) to regenerate brain causes of cell death) in the nervous system; (vii) to improve brain performance, including learning and memory; (x) to treat or prevent a poptosis (v) to treat or prevent approve brain confidence, including learning and memory; (x) to treat or prevent approve brain or lung injury associated with protease expression (specifically emphysema or honory; (x) to treat brain or lung injury associated with protease expression (specifically emphysema or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

The present sequence is a Serine protease designated BSSP-3, which is isolated from mouse brain tissue. Transformants may be used to produce the enzyme or its partial sequences. Products from the present invention are used for screening for potential peptide or non-peptide serine protease inhibitors or expression regulators for use as drugs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Tsuruoka N, Yamaguchi N, WPI; 99-142942/12. Claim 2: Fig 2: 54pp: German.

This sequence represents a human protein which contains a SRCR (scavenger receptor, cysteine-rich) domain. The gene and encoded protein can be used to diagnose or treat tumours, particularly of the nervous system (medullo-blastoma or glioma) or breast. The DNA sequence and probes derived from it, are used to identify genes that express SRCR-domain containing proteins, to determine the form in which these proteins exist and to assess the significance of individual forms on cellular properties. The protein can be used to detect the presence of autoantibodies and antibodies which regulate its expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Proteins containing scavenger receptor, cyste useful for diagnosis and treatment of tumours
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Mollenhauer J, Pou

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
                                                                                                                                             cysteine-rich (SRCR) family. The sequence was deduced from an isolated CDNA clone (see V54605). Sp alpha transcripts are found in human bone marrow, spleen, lymph node, thymus and foetal liver but not in non-lymphoid tissues. Sp alpha has the same domain corganisation as the extracellular region of CD5 and CD6 and is composed of 3 SRCR domains. It is capable of binding to cells of the monocytic lineage, and appears to be involved in the regulation of monocyte activation, function and/or survival, and is therefore an important component in the immunoregulatory system. Methods of recombinantly producing Sp alpha are disclosed. In addition, antibodies reactive with Sp alpha are provided, as are methods of using antibodies that bind to Sp alpha for modulating the interaction between Spalpha and its receptor. Sp alpha can be used

with abnormal keratinocyte differentiation (e.g. psoriasis, epithelial cancers such as lung squamous cell carcinoma of the vulva and gliomas), potent effects on cell growth and development, diseases related to growth or survival of nerve cells including Parkinson's disease, Alzhelmer's disease, Als, neuropathies or cancer. PRO265 can be used as for fibromodulin, e.g. for reducing dermal scarring. PRO264 can be used as a target for anti-tumor drugs. PRO533 may be used in the treatment of Usher Syndrome or Atrophia areata; PRO530 can be used as an anti-thrombotic agent; PRO370 polypeptides and portions may have therapeutic applications in wound healing and tissue repair; PRO317 can be used for treating problems of the kidney, uterus, endometrium, blood reseals, or related tissue, e.g. in the heart of genital tract.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        24-NOV-1997;

                                                                                                                                                                                                                                         associated with the preservation and maintenance of gastrointestinal mucosa and the repair of acute and chronic mucosal lesions (e.g. enterocolitis, Zollinger-Ellison syndrome, gastrointestinal ulceration and congenital microvillus atrophy), skin diseases associated
                                                                                                                                                                                                                                                                                                                  Y13344-403 represent secreted and transmembrane human proteins. The cDNA sequences are obtained from cDNA libraries, prepared from fetal lung, fetal kidney, fetal brain, fetal liver and fetal retina. The encoded polypeptides have specific uses based on their homology known polypeptides, e.g. PRO211 and PRO217 can be used for disorders.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Mean 49.212; Variance 79.920; scale 0.616
